

# M.Sc. Management and Engineering in Production Systems (MME-PS)

Fuse your engineering knowledge with business management skills and become an industrial engineer who leads companies to success. With our MME-PS, you develop a global mindset to manage industrial projects while building a strong application orientated background to plan new production technologies and systems.

## As an M.Sc. MME-PS student, you will learn to:

- ▶ design, direct, monitor and optimize production processes
- ▶ optimize management control systems for more efficient financial planning and cost analysis
- ▶ identify and implement measures for yield improvement, test optimization and product cost-ability methods
- ▶ plan cutting-edge factories by selecting innovative production machines and assembly systems

Deepen your knowledge in advanced production technology and unlock your business leader potential!
