Excellent start into the world of Physics

At RWTH Aachen University we want to ensure that you get an excellent start to your Master’s in Physics. Most graduates from universities other than RWTH Aachen need to pass additional subjects as condition for admission. These courses are part of the German-taught Bachelor degree in Physics. In the Master’s College, you can fulfill these admission requirements in specific courses taught in English some weeks before your Master’s program. Moreover, the complementing academic and social support will increase your chances of success.

Academic success

Your journey abroad and future studies will may be difficult and complex, but we will support you every step of the way. Our e-learning platform EddiMac gives you the opportunity to do exercises at home and to discuss your solutions with your future lecturers during a webinar. Once you arrive in Aachen our bridging courses will help prepare you for your studies and by means of close mentoring our support for you will continue throughout your degree program.

Social community

We do not just support you in academic matters. By planning social events, we also help you integrate into life in Aachen. In the program, you will immediately get in contact with other students, e.g. at a joint lunch on your first day of the Master’s College. We will show you around the historic city of Aachen, go nine-pin bowling with senior students, take you on a Scavenger Hunt with other students of the RWTH International Academy and organize exclusive excursions just for you.
Master’s College Physics  Know your possibilities!
